Milk Production Continues to Decline

June Milk Production Down 0.6%

Estimated United States milk production during June 2001 totaled 13.9 billion pounds, down 0.6% from a year earlier.

The estimated number of cows on U.S. farms in June was 9.1 million head, 98,000 head fewer than June 2000.

However, U.S. production per cow is estimated at 1,525 pounds for June, 6 pounds, or 0.4%, above a year earlier.

For the top five milk producing states, production in June 2001, compared to June 2000 was up 3.2% in California, but down 1.1% in Pennsylvania, 1.5% in New York, 3.4% in Wisconsin, and 5.3% in Minnesota.

January-June Milk Production Down 1.7%

U.S. milk production for the first six months of 2001, estimated at 84 billion pounds, was down 1.7% from the same period in 2000, when adjusted for leap year. The decrease resulted from a 0.7% drop in the average number of milk cows and a 1% average decline in production per cow.

Milk production for January-June 2001 is down more than 5% in Minnesota and more than 3% in Wisconsin.

Distributing Plant Units

Distributing plants (bottling plants) are defined in §1030.5, with performance requirements defined in §1030.7(a) and (b). These performance requirements can be met as a “unit”, as defined in §1030.7(e).

At least one of the plants in the unit must qualify as a distributing plant, with the

other plants using at least 50% of their milk processing Class I or Class II products.

This unit pooling provision allows shipments to any of the plants in the unit to count as qualifying shipments for supply plants and supply plant systems.

All plants in a distributing plant unit must be operated by the same handler.

The following distributing plants have requested unit pooling status. These units will continue from month-to-month until further notice.

Unit A

- ◆ Dean Foods Company – Belvidere, IL
- ◆ Dean Foods Company – Chemung, IL
- ◆ Dean Foods Company – Huntley, IL

Supply Plant Systems

Supply plants are defined in §1030.6, with performance requirements defined in §1030.7(c). In general, supply plants are required to ship 10% of their receipts to bottling plants.

These performance requirements can be met as a “system”, as defined in §1030.7(f).

This provision allows two or more supply plants operated by one or more handlers to qualify for pooling by meeting the shipping requirements in the same manner as a single plant. In other words, an individual plant in a system does not need to qualify on its own, as long as the system as a whole qualifies.

Supply plants in a system generally must be located in the marketing area.

The following supply plants requested system pooling for the period of August 2001 through July 2002.
