## Producer Price Differential at 70¢

The producer price differential for the Upper Midwest Order for July 2000 is 70¢ per cwt., down 27¢ from June. The resulting statistical uniform price of \$11.36 per cwt., however, is up 93¢ from June.

Producer milk in July 2000 totaled 1.917 billion pounds,

down 4% on a daily basis from June. During the month, 18,195 producers delivered to the market with an average daily delivery of 3,364 pounds.

Class I use in July totaled 314 million pounds, down 7% on a daily basis from June. The decrease resulted primarily

from a decline in disposition of fluid milk products on routes. During the month, Class I usage accounted for 16.4% of producer milk.

Market statistics for July are shown on Pages 4 and 5.

## Milk Production Continues to Increase

### June Milk Production Up 2.6%

Estimated United States milk production during June 2000 totaled 14 billion pounds, up 2.6% from a year earlier. U.S. production per cow is estimated at 1,517 pounds for June, 30 pounds, or 2.0%, above a year earlier.

The estimated number of cows on U.S. farms in June was 9.2 million head, 58,000 head more than June 1999 and 11,000 head more than May 2000.

For the top five milk producing states, production in June 2000, compared to June 1999, was up 6.6% in California and 0.4% in Pennsylvania, but down 0.5% in Minnesota, 1.5% in Wisconsin and 1.8% in New York.

### January-June Milk Production Up 3.3%

U.S. milk production for the first six months of 2000, estimated at 86 billion pounds, was up 3% from the same period in 1999, when adjusted for leap year. The increase resulted from a 1% rise in the average number of milk cows and a 3% average increase in production per cow.

**Milk production for January-June 2000 is up nearly 1% in Minnesota, but down fractionally in Wisconsin.**

### Milk Production--Top 5 States & U.S. January - June

## Distributing Plant Units

Distributing plants (bottling plants) are defined in §1030.5, with performance requirements defined in §1030.7(a) and (b). These performance requirements can be met as a “unit”, as defined in §1030.7(e).

At least one of the plants in the unit must qualify as a distributing plant, with the

other plants using at least 50% of their milk processing Class I or Class II products.

This unit pooling provision allows shipments to the any of the plants in the unit to count as qualifying shipments for supply plants and supply plant systems.

All plants in a distributing plant unit must be operated by the same handler.

The following distributing plants have requested unit pooling status. These units will continue from month-to-month until further notice.

### Unit A

- ◆ Dean Foods Company – Chemung, IL
- ◆ Dean Foods Company – Huntley, IL
- ◆ Dean Foods Company – Rockford, IL

### Unit B

- ◆ Marigold Foods, Inc. – Cedarburg, WI
- ◆ Marigold Foods, Inc. – Minneapolis, MN
- ◆ Marigold Foods, Inc. – Rochester, MN

## Supply Plant Systems

Supply plants are defined in §1030.6, with performance requirements defined in §1030.7(c). In general, supply plants are required to ship 10% of their receipts to bottling plants.

These performance requirements can be met as a “system”, as defined in §1030.7(f).

This provision allows two or more supply plants operated by one or more handlers to qualify for pooling by meeting the shipping requirements in the same manner as a single plant. In other words, an individual plant in a system does not need to qualify on its own, as long as the system as a whole qualifies.

Supply plants in a system generally must be located in the marketing area.

The following supply plants requested system pooling for the period of August 2000 through July 2001.

### System A

- ◆ Associated Milk Producers, Inc. – Turtle Lake, WI
