Class Prices and Producer Prices 7

Cheese and Butter Prices Up

Prices for cheddar cheese and butter on the Chicago Mercantile Exchange (CME) increased more than 15¢ from mid-June to mid-July.

The CME barrel price on July 16 was \$1.52½ per pound, up 16¢ from June 16, while the 40-pound block price of \$1.57½ per pound was up 17½¢ from mid-June. Barrel and block prices are about 40¢ above year-earlier levels.

The CME butter price on July 16 was \$1.77½

per pound, up 15½¢ from June 16. Butter prices for the year have been on an upward trend, as can be seen in the graph below. The year-earlier level for the CME butter was \$1.27, more than 50¢ below the current level.

The June Federal order Class III price was \$13.62 per cwt., up 24¢ from May, and \$3.65 above June 2009. The CME Class III futures currently has the price climbing to \$15 in September.

Chicago Mercantile Exchange -- Selected 2010 Dairy Prices *

* Prices depicted are per pound for each day in 2010 that trading occurred through July 16.

Pool Summary

- In June, producer milk totaled 2.9 billion pounds, down 130 million pounds from May, but 129 million pounds above June 2009.
- Class I utilization totaled 331 million pounds, down 4.4% from May on a daily basis. Class I usage accounted for 11.5% of producer milk.
- Class III utilization totaled 2.5 billion

pounds and accounted for 86.3% of producer milk.

- The June Producer Price Differential (PPD) was \$0.52 per cwt.
- The Statistical Uniform Price was \$14.14 per cwt., up \$0.37 from May, and \$3.85 above June 2009.
- Market statistics for June are shown on Pages 4 and 5.

June 2010 Producer Milk by Class

	Percent	Product Pounds	Price \$/cwt.
Class I	11.5	331,471,782	17.08
Class II	1.8	52,641,230	16.01
Class III	86.3	2,492,611,647	13.62
Class IV	0.4	10,722,542	15.45
Total		2,887,447,201	

Milk Hauling Charges in the Upper Midwest Market

Milk hauling charges (to the first point of delivery) were examined for producers associated with the Upper Midwest Order for May 2009. This article summarizes major findings from the May 2009 analysis and makes comparisons to earlier studies. The complete studies are available on our website at:

www.fmma30.com/Homepage/FO30_STAFF_PAPERS.htm.

Hauling charges used were the deductions for hauling shown on producer payrolls submitted to the Market Administrator for the Upper Midwest Order. They do not necessarily reflect the actual cost of the hauling. In many cases, handlers or cooperatives have subsidized milk hauling costs or absorbed additional hauling costs as operating expenses.

Hauling charges have been examined for the month of May to maintain consistency from study to study. Therefore, statements in this article about the hauling charge for a particular year refer to the average hauling charge for May of that year. Further, hauling charges referred to are on a per hundredweight basis.

Average Hauling Charges in 2009 Compared to Previous Years

The average hauling charge for the market in 2009 was \$0.2984, the highest since Federal order reform in 2000. The 2009 average was 2.10¢ above the 2008 average, and 12.74¢ more than the 2001 average. (See Table 1 below.)

Average Milk Hauling Charges by State

In 2009, the Minnesota statewide average of 33.75¢ was 3.91¢ above the market average, while the Wisconsin state average of 22.43¢ was 7.41¢ below the market average. These two states supplied 22% and 59%, respectively, of milk associated with the market in May 2009. Hauling charges averaged 28.60¢ in Illinois, 31.09¢ in Iowa, 47.61¢ in Michigan, \$1.0078 in North Dakota, and 69.83¢ in South Dakota. These five states combined supplied 15% of milk on the order during the month, and other states not in the marketing area supplied the remaining 4%.

The pattern of hauling charges across the milk procurement area in 2009 was sim-

ilar to previous years, with charges generally increasing moving west and north across the milk procurement area. For the marketing area, Wisconsin had the lowest average hauling charge of any state with producer milk associated with the market, while North Dakota had the highest average charge.

Differences in hauling charges across the milk procurement area in 2009, as well as in earlier years, likely relate to the relative distance from farm to plant and between individual farms. These hauling distances, on average, tend to be smaller in areas where there is a higher concentration of dairy farms and plants. This would tend to reduce the per hundredweight hauling costs in those areas. Also, a higher concentration of dairy farms and milk plants in an area generally means more intense competition for milk supplies resulting in greater subsidization of hauling by handlers and cooperatives.

Milk Hauling Charges by Size Range of Producer Delivery

A dairy producer's herd size or milk volume usually influences the producer's

Table 1
Average Hauling Charge, by State and for the Marketing Area,
for May of Selected Years

State	Average Hauling Charge								
	May

Market Average	0.1710	0.1993	0.1990	0.2131	0.2269	0.2349	0.2500	0.2774	0.2984

cost of hauling. Hauling charges in 2009 generally decreased as the size of delivery increased. (See Table 2 below.) The average hauling charge for producers delivering less than 60,000 pounds was 63.00¢, while the average hauling charge for producers delivering two million pounds or more was 11.42¢.

The inverse relationship found in 2009 between per hundredweight hauling charge and volume of delivery was also apparent in each of the earlier years. The most obvious factor responsible for influencing the producer's hauling rate per hundredweight, by herd size range, is that most Upper Midwest handlers

charge a fixed hauling dollar value to dairy producers, regardless of the volume of milk the particular producer is marketing. Therefore, as one of these producer's production increases, his or her hauling charge for hundredweight will automatically decrease.

* The column averages for each State in Table 2 are weighted differently than the State averages in Table 1. Table 2 averages the hauling charge over the entire distribution of producer size ranges while Table 1 is weighted according to volume.

Milk Production Continues to Increase

June Milk Production Up 2.4%

Estimated United States milk production during June totaled 16.3 billion pounds, up 2.4% from last year.

U.S. production per cow is estimated at 1,790 pounds for June, up 64 pounds, or 3.7%, from a year earlier.

The estimated number of cows on U.S. farms in June was 9.1 million head, 108,000 head less than June 2009, but 11,000 head more than May 2010.

For the top six milk producing states,

production in June 2010, compared to June 2009, was up 5.1% in Wisconsin, 3.5% in California and Idaho, 2.1% in Minnesota, 1.1% in Pennsylvania, and 0.2% in New York.

January-June Up 0.8%

U.S. milk production for the first six months of 2010, estimated at 97.1 billion pounds, was up 0.8% from the same period in 2009. The increased production resulted from a 2.8% average increase in daily milk production per cow, although the milk cow numbers decreased 1.9%.

Milk Production Top 6 States & U.S. January - June 2010

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.
