Supply Plant Systems

Supply plants are defined in §1030.6, with performance requirements defined in §1030.7(c). In general, supply plants are required to ship 10% of their receipts to bottling plants.

These performance requirements can be met as a “system”, as defined in §1030.7(f).

This provision allows two or more supply plants operated by one or more handlers to qualify for pooling by meeting the shipping requirements in the same manner as a single plant. In other words, an individual plant in a system does not need to qualify on its own, as long as the system as a whole qualifies.

Supply plants in a system generally must be located in the marketing area.

The following supply plants requested system pooling for the period of August 2012 through July 2013. An electronic copy of this list and the order language referenced here can be found on our website: www.fmma30.com.
